# | day-use tubing set

The Eco-Flow™ Day-Use Tubing Set is a cost-effective two-part tubing set that allows the pump tubing to stay in place through the surgical day. Only the patient portion of the tubing set is replaced after each case.

## ORDERING INFORMATION

The Eco-Flow Day-Use Pump Tubing (10K600) will stay on the pump throughout the surgical day, while the Eco-Flow Single-Use Patient Tubing (10k605) extends to the sterile field, and is discarded after each case.

Catalog No.	Qty
10k600 Eco-Flow Day-Use Pump Tubing	4
10k605 Eco-Flow Single-Use Patient Tubing	12

## FEATURES AND BENEFITS OF THE ECO-FLOW DAY-USE TUBING SET:

- Saves fluid by not requiring the remaining fluid to be discarded after the end of a surgical case
- Saves tubing costs, as the main pump tubing stays in place throughout the surgical day. Only the patient portion of the tubing set needs to be replaced for each case.
- Saves set-up time. Only the patient portion of the tubing set needs to be passed off from the sterile field before each case. The pump portion of the tubing set stays in place the entire surgical day and no additional new fluid bags need to be spiked until the old ones are completely empty.

## THE ECO-FLOW DAY-USE TUBING SET OFFERS TWO UNIQUE PARTS:

- Touch-Proof Connectors: Keeps contamination from entering the site where the patient and pump tubing connect.
- Backflow Check Valve: Reduces the risk for contamination by not allowing fluid to flow back through the tube set toward the Pump Tubing Set.

*The EcoFlow Day-Use Tubing Set can be used with either the 10k or 24k fluid arthroscopic pumps for an added flexibility to your medical facility.*
