### The special features afforded by Magnus:

- Modular concept and components

## Maquet Otesus

### Explore new possibilities

Maquet Otesus features a number of key enhancements developed in collaboration with OR teams, while retaining many tried-and-trusted features of its proven predecessor – minimizing the need for training. The modular operating table system includes a column, a hand control, a user-friendly transporter, and a wide variety of table tops and accessories. Surgical staff can tailor the table to each surgery and patient by simply swapping a few modules.

### Comfortable, hygienic cushions

Soft Integral Protective Comfortable (IPC) cushions offer excellent pressure relief performance that is comparable to Soft Foam Core (SFC) cushions. An inner core sandwich design connects 20 mm wear protection and 60 mm visco-elastic foam to a carrier plate, which is then covered with a spray skin. The hygienic, Velcro®-free pads are waterproof. Certain variants of the pads can be mechanically decontaminated and disinfected.

### Patient transport between rooms

The Maquet Otesus Transporter allows surgical staff to maneuver patients with minimal physical effort. It simplifies the reconnection and disconnection of the table tops to the Maquet Otesus Column to streamline the workflow in the operating room.

### All key operations at your fingertips

The Smart Control places all key table operations right at your fingertips. Bi-directional communication with the column provides real-time information on the current table configuration. The Smart Control continuously receives and displays the table set-up information, which saves time, enhances safety, and simplifies documentation.

# Maquet Mobile Operating Tables

Versatile, tried and tested – real all-rounder

## Maquet Betaclassic

### High-quality and cost-efficient mobile operating table

A manually operated hydraulic power unit and ergonomically designed controls are standard on the robust Maquet Betaclassic. A few swift pumps of the pedal-operated selector enable precise adjustment of the table top position. The proven design ensures excellent table stability and unrestricted patient access for the surgical team.

Maquet Betaclassic provides dedicated solutions for military and disaster medicine, as it does not depend on any external power source. Thanks to the large castors, the OR table can be transported regardless of the terrain.

## Maquet Lyra

### A versatile table for all-around use

It's increasingly important to invest in reliable, multi-functional infrastructure. That's why Getinge developed the Maquet Lyra Mobile OR Table. Just one table can meet the needs of most surgical disciplines, and it is compatible with carbon-fiber accessories for excellent intra-operative diagnostics.

The Maquet Lyra Mobile OR Table is designed to work for almost all surgical disciplines, increasing the options for each OR. Plus, it's compatible with all existing Maquet Mobile OR Table accessories that you may already have, maximizing the return on your investment.

The Maquet Lyra Mobile OR Table has a robust design that ensures stability and safety for a broad range of patients. It has an overall load (patient plus accessory) of 360 kg (794 lbs) in central position, and 180 kg (397 lbs) without any restrictions – ideal for most patient populations.

## Maquet Meera family

### High performance, outstanding value

Hospitals of all sizes struggle with increasing cost pressures. With the Maquet Meera Mobile OR Table family, your hospital can cost-effectively deliver premium patient care.

#### Maquet Meera:

##### A universal mobile table for high-quality care

The mobile operating table Maquet Meera offers incredible flexibility to support a variety of procedures. The 310 mm motorized longitudinal shift delivers a large radiolucent area for gynecological or urological surgery, without an added seat plate extension. Maquet Meera is a stable OR table that meets the complex demands of bariatric surgery.

#### Maquet Meera ST:

##### A multifunctional table for various types of procedure

Maquet Meera ST offers the same benefits as the Maquet Meera, without the longitudinal shift. It ensures that your OR will benefit from a solid, functional table, without features that your surgeons do not require.

#### Maquet Meera CL:

##### Flexibility for many disciplines

Maquet Meera CL is built with the same stable components as the rest of the Meera range, but on a simplified base with a mechanical locking system. Specially designed castors enable smooth movement in all directions: intermediate operation, straight-line travel, and free-wheeling. Lateral movement capability is ideally suited for the needs of outpatient surgery centers.

## Maquet Alphamaxx

### Maximum load capacity, maximum flexibility and maximum comfort

The mobile universal OR table offers maximum loads, flexibility and comfort. It can be easily equipped for every surgical discipline and offers a load capacity of up to 450 kg. The motorized longitudinal shift of up to 460 mm

provides an optimal solution in terms of X-ray access and ergonomic use. The optional Autodrive makes moving and maneuvering the table easier and with the Sensor Drive even the speed can be controlled.

## Maquet Yuno II

### Improves outcomes with advanced surgical workflows in orthopedics, traumatology and neurology

Maquet Yuno II ensures the positioning and access needed to achieve optimum results in open or minimally invasive interventions. The table can be configured for any discipline, increasing your options and maximizing the functionality of your OR. Easy handling ensures that Maquet Yuno II will simplify positioning for even the most complex techniques to help you focus on what's most important: your patients.

Minimally invasive surgery (MIS) can improve patient outcomes and save costs. Maquet Yuno II supports a variety of positions, bringing the benefits of MIS to

patients of various sizes. Radiolucent carbon-fiber accessories improve intraoperative diagnostics that are critical to achieving optimal outcomes.

When trauma patients arrive in your emergency department, there's no time to lose. Night or day, your OR must be ready. With the flexible Maquet Yuno II Mobile Operating Table, it's easy to quickly configure the table to meet the needs of the procedure and surgeon, even with limited staff on call.

# 02 Accessories for operating tables

## Head rests

**The head rest plays an important role in the anatomically correct positioning of the patient. For this purpose, Maquet offers a wide variety of head positioning accessories: from head rest adapters and simple head rests through to radio-lucent horseshoe head rests.**

All standard head rests and horseshoe head rests have special pads. SFC materials and gel pads ensure optimum distribution of pressure. This enables the OR team to concentrate on the operation with the patient comfortably and safely positioned. Easy Click interfaces enable quick and easy mounting of the head positioning accessories. The requirements of anesthesia and surgical departments are equally met: The anesthesia department requires easy operation with lateral side rails for accessories, whereas surgeons require precise adjustment options.

# 03 Accessories for operating tables

## Arm supports

**Correct support for the patient's arm plays an important part in a successful procedure. A poorly positioned arm may lead to nerve damage for the patient. Even in short interventions, it may result in pressure points on the skin.**

Maquet accessories with SFC padding minimise this risk. In addition, the exact adjustment mechanisms ensure that the supports can be adapted to suit both patient and OR team so that the patient's arm can be securely and comfortably positioned.

These arm-support accessories meet the requirements of anesthesia and surgical departments alike. The anesthesia team benefits from quick and easy adjustment of the arm, while the work of the OR team is facilitated by using the arm protector 1002.25A0. This arm protector secures the patient's arm and, at the same time, offers the surgeons something to lean on and thus relieve the strain on their spine.

Cross-discipline accessories  
**Back and lithotomy positioning**

The range of back plates supplied by Maquet is extremely versatile. They include from radiolucent multi-purpose plates, modular back plates for shoulder operations, extension plates for very large patients, and trapezoidal shaped plates that improve ergonomic access to patients. Seat plate extensions, for example, for laparoscopy or urological interventions, complete the range.

All accessories for supine positions have something in common: high quality and durability. As surgical procedures have changed over the years, appropriate OR tables and accessories have been developed in line with the new requirements. They are designed to promote optimum workflow by way of their high modularity, adaptability and short changeover times.

## Leg positioning

Safe and comfortable leg positioning supports optimum treatment outcomes for the patient. At the same time, lightweight leg plates or transfer boards considerably ease the frequent changeover of OR tables, as is usual in, for example, gynaecology.

For every type of leg position, Maquet offers suitable accessories. From simple leg plates and flexible leg plates in four segments, through to leg holders for gynecological and urological interventions. Special carbon-fiber materials meet the high demands of imaging procedures.

Accessories for operating tables

## Orthopedics and traumatology

**Modern orthopedics and traumatology require particularly demanding positions and accessories that are coordinated for interventions.**

Maquet's accessories for orthopedics and traumatology cover the full range of standard applications. In conjunction with experts and users, innovative solutions are developed which support new surgical procedures. More advanced imaging procedures, such as 3D X-ray technology, again increase the demands placed on OR tables and accessories in orthopedics. Maquet accessories for orthopedics and traumatology meet the requirements for optimum X-ray results: from high-quality carbon-fiber materials through to the shape of the modules and to the radiolucency of the pad material.

# 07 Accessories for operating tables

## Neurosurgery

**Stable and anatomically precise patient positioning is important for all surgical disciplines, none more so than neurosurgery because any unintentional movement of the OR table could influence the position of the patient and have fatal consequences.**

Special accessories such as the cross-bar attachment 1005.2300 and securing functions like the Neuro-Lock, a feature of the Magnus OR Table System, provides a secure and precise positioning for neurosurgical interventions.

All Maquet OR Tables are designed to give the surgeon optimum access to the patient. The use of modern imaging procedures, for example, 3D X-rays, places increasing demands on the OR table accessories for neurosurgery. With specially designed and radiolucent accessories as well as high-quality pads, our products facilitate optimum X-ray results.

# 08 Accessories for operating tables

## Positioning aids

**Positioning injuries are potential complications of surgical operations. Positioning aids can reduce this risk and help to prevent decubitus during the surgery and on the ward.**

In addition to the medical aspect, positioning aids are also ideal for making patients more comfortable on the OR table. When required to lie in a supine position for a long period, patients often complain of backache. Gently raising the legs with the help of a pad, for example, the leg rest 1001.94A0, will take the pressure off the spine.

The positioning aids listed here are simple to use and easy to clean. They are high quality and very durable. For all positions, there are complementary gel cushions or pads in various sizes.

# 10 Overview

## Accessories matrix and index

**The most important information at a glance: Use the accessories matrix to quickly and easily find out which accessory can be used with any given OR table.**

The accessories are sorted by article number, and symbols are used to identify the most important information. Firstly, the OR tables that the accessory can be used with and, secondly, what type of mounting point it has. You can also see what page the accessory is on.

If you do not know the article number, the index will help. It lists all the accessories in the catalog alphabetically. At the end of the chapter there is a page for making notes and an order form.
