

The first thing you'll notice about the Carestation 650 is its sleek, modern and compact design made to fit wherever you need it.

Tactile controls

Familiar touchscreen interface

Ergonomically friendly

Engineered for mobility

Durable and stable frame

Simple. Classic GE performance and an intuitively familiar

user experience.

A rotating clinical staff in a fast-paced OR requires easy tools to master with minimal product training. In order to focus more time on the patient, anesthesia technology must balance intuitive user interface design with software intelligence to deliver information that can help enhance patient care. The Carestation 650 combines secondgeneration digital touchscreen technology with familiar tactile controls that are easy to operate. When seconds count, the seamless and familiar CARESCAPE™-inspired user interface helps you react quickly to changing conditions.

Familiar touch user interface

The advanced 15-inch touchscreen user interface unites the ventilation and patient monitoring controls for a seamless Carestation experience. The sustem features a flat menu structure and crisp, high contrast image clarity to make it easy to configure and operate.

Easy alarm management

Auto Alarm Limits software mau help reduce alarm fatigue allowing you to quickly review and accept tailored CO2 and MV/TV alarm limits real-time within a case.

Pause Gas Flow

A workflow solution that simplifies temporary circuit disconnects. One button temporarily stops all gas flows and suspends alarms, agent delivery and ventilation for up to one minute allowing you to focus on the patient.

Fast checkout

The dailu checkout process is as simple as it is thorough. Complete the checkout in as fast as three minutes using the clear, step-by-step onscreen guidance.

Ergonomic controls

Familiar, tactile and easu to use controls are comfortably within reach to help eliminate stretching and awkward positions.

Intelligent lighting controls

Intelligent lighting highlights active flow controls and visible reinforcement is provided on the ventilation screen to highlight flow status whenever auxiliary ports are in use.

Flexible options that help expand coverage, enhance performance and grow with you as your needs change.

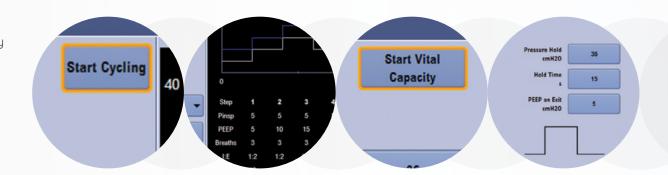

Space-saving hardware

The rotating and tilting display arm supports our CARESCAPE patient monitors to unite critical information and controls for a unified user experience. The integrated gas module brings essential respiratory parameters directly to the ventilator display and frees up space for additional patient monitoring parameters.

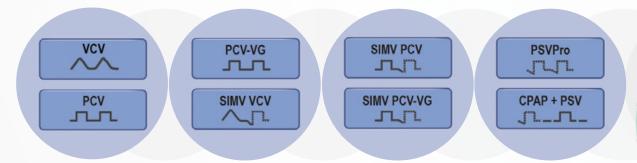

Time-saving software

Software-enabled tools help simplify your workload. Vital Capacity and Cycling Procedures help automate repetitive tasks used during lung ventilation procedures.

Advanced ventilation – neonate to adult

Healthcare is more complex than ever and your anesthesia system needs to adapt to suit a wide range of patients. Our electronic flow valve technology offers precise flow sensor sensitivity for volumes as low as 5 mL in PCV mode to help you deliver with confidence.

Low flow. High impact.

ecoFLOW

Clinicians skilled in the practice of low and minimal flow anesthesia delivery understand that sometimes less is more. That's why we developed ecoFLOW, an efficient anesthesia delivery technology that provides visual guidance to help you maintain the desired inspired oxygen concentration and identify unnecessarily high fresh gas flow rates.

Anesthetic agents are not only costly, but scientific evidence suggests that excess inhaled agents released into the atmosphere have the potential to affect the environment. Offered on the Carestation 650, ecoFLOW may have a positive impact on the environment when agent waste gases are reduced.

Patient

Helps your patient care by continuously monitoring the precise flow rates required to maintain target inspired oxygen concentrations.

Economical

Anesthetic agents are the biggest ongoing expense associated with anesthesia units. The ecoFLOW option offers cost savings through more efficient utilization of inhaled anesthetics.²

Ecological

By choosing a low flow practice, the environmental impact of anesthetic vapors and gases can be minimized to help reduce the impact of these greenhouse gases.

ecoFLOW technology

A new way to look at flow tubes to help you ensure your inspired oxygen target settings are achieved.

The illustration shows flows above the Fi25 target as potential waste gas or excess to the patient's consumption. Whenever fresh gas flow exceeds the patient's requirement, gases enter the scavenging system and, ultimately, contaminate the atmosphere.

ecoFLOW savings

ecoFLOW shows you a target and displays the cost of the liquid agent that corresponds with your set flow.

Use the information to adjust oxygen flow to help avoid hypoxic delivery or unnecessarily high fresh gas flow rates.

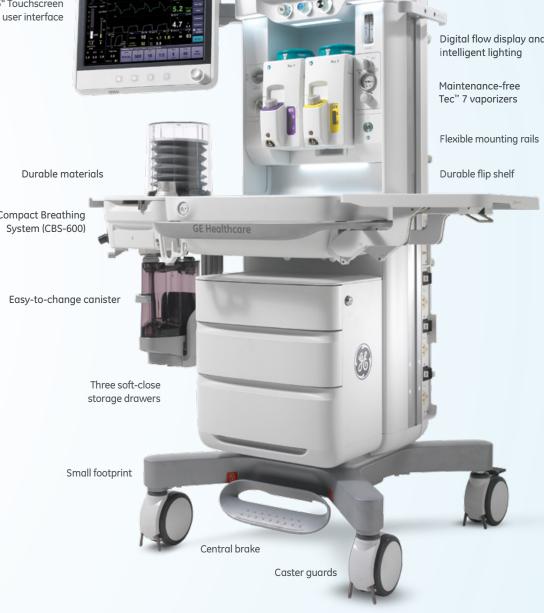

Sleek. Simple. Scalable. It's all within reach.

Carestation 650

www.gehealthcare.com

GE Healthcare provides transformational medical technologies and services that are shaping a new age of patient care.

Our broad expertise in medical imaging and information technologies, medical diagnostics, patient monitoring systems, drug discovery, biopharmaceutical manufacturing technologies, performance improvement and performance solutions services help our customers to deliver better care to more people around the world at a lower cost.

In addition, we partner with healthcare leaders, striving to leverage the global policy change necessary to implement a successful shift to sustainable healthcare systems.

Imagination at work
