

Stand Up for Safety with HandStand™

The risk of Hospital-acquired infections (HAI) can be a nightmare of healthcare facilities. Designed to reduce that risk, the sterile disposable kits of the HandStand™ Traction Tower eliminate strap reprocessing and the need for strapping and unstrapping outside of the sterile field. Taking safety one step further, the HandStand™ incorporates metals known to cool quickly ensuring staff and patient safety.^{1,2}

Sterile Disposable Kits

- For guaranteed sterility, these convenient disposable kits feature a double sterile barrier that eliminates strap reprocessing and provides every patient with safe, sterile materials.

Clinically Modernized Traps & Straps

- Eliminated the need to strap and unstrap outside the sterile field- the new Bicep strap easily clips in and out of the base plate. Everything remains within the sterile field for the entire case.
- Unique Digit Trap® design features a customizable tensioning mechanism to ensure consistent grip on the digits so surgeons don't spend time re-tensioning or have to utilize gripping agents that can cause skin reactions in patients.

QuickCool™ Technology^{1,2}

- Designed to keep patients and OR staff safe, QuickCool™ technology means the HandStand™ is never too hot to handle. In fact, when compared to our legacy Traction Tower®, the HandStand™ cools almost 10% faster. And in situations where a quick turnover is required, simply place the tower in saline post-autoclave and the metal will become cool-to-the-touch within seconds.
