## Endo Face Lift Instruments

Endoscopic plastic surgery is essentially improved by the new and innovative RZ Face Lift Instruments. The unique handle design allows increased tactile feedback by simply rollig Thumb and Index Finger, thus control and comfort is consequently enhanced. These versatile Instruments are designed for exact dissections of fascia, muscle and periosteum. Malleable and insulated shafts match facial contours, introducing the temporal slit incision to dissect above the acus marginalis or cutting periosteal attachments to the superolateral orbital rim becomes a new comfort way in face lift surgery.
